NOTES TO TABLE 1:

1. Country reports are generally obtained from websites of national agencies. These reports in some cases do not provide complete information.
2. For The Bahamas, the number of deaths in the table excludes **67 deaths** that are under investigation and **131 deaths** that are classified as due to non-COVID-19 causes of COVID-19 positive persons. The total number of deaths of COVID-19 positive persons is **855**.
3. For Jamaica, the number of deaths in the table excludes **339** deaths that are under investigation and **188** deaths that are classified as coincidental. The total number of deaths of COVID-19 positive persons is **2801**.
4. Generally, the total doses administered can be obtained by adding the sum of the first and second doses for the respective countries, but this is not always the case. As shown in the table the percentage of persons fully vaccinated is given as a percentage of the total population and not of the target population, which may vary across countries, such as the 12+ or 18+ population. In addition, the estimated population was obtained from the United Nations Population Division and may differ from the country estimate.
5. While every effort was undertaken to present data as at Friday 5 November, for a few countries the data are as at 1-3 November, 30 October in the case of Haiti and 6 October in the case of the British Virgin Islands.
