Special Topic Statistical Bulletin - COVID-19

Issue 17, 17 July 2020

The **Special Topic Statistical Bulletin on COVID 19 in CARICOM Countries Issue 17**, provides an update of the trajectory of the COVID-19 in the CARICOM Region up to **17 July 2020**. The Bulletin provides information on the pattern of the disease of the total number of confirmed cases, new cases and deaths for each country and the total for CARICOM. The data are preliminary and will be adjusted as more reliable data are made available. This Issue continues to explore graphically, the movement in the curves for the number of confirmed cases to deduce whether they are flattening or expanding upwards as a reflection of the transmission of the virus. The Section, *What do we learn from the Data?* is updated. The Projections are compared with the actual values for this reporting period. In general, these projections may be far removed from the reality of the situations in countries and may not depict the actual outcomes. Limited data are available on Sex and by Mode of Transmission of the virus. *The repatriation of nationals in a few countries is reflected in increases in confirmed cases in the respective countries. Local transmission of the virus is also continuing.* There are about twelve countries with less than 10 active cases. *The trends in the data on testing continue to be critical to tracking the pandemic.* The primary approach to sourcing the data continues to be web-scraping of information from official sources of countries. Please review the back issues for other key explanations about the data.

08-Jul	9113	108	205
09-Jul	9210	97	211
10-Jul	9352	142	219
11-Jul	9418	66	225
12-Jul	9504	86	230
13-Jul	9588	84	230
14-Jul	9626	38	232
15-Jul	9776	150	235
16-Jul	9945	169	237
17-Jul	10032	87	238

Note: The Number of Confirmed Cases and the Number of Deaths are cumulative values while the Number of New Cases is not cumulative and reflects the daily number of cases. Please see Issue 10 for the explanation on how the cumulative values are derived. Please check previous Issues for the data from 10 March— 12 June 2020.

What do we learn from the Data?

[as at 17 July 2020]

The number of confirmed cases moved from **9352 (adjusted)** as at **10 July** to **10,032 cases on 17 July**. The number of deaths moved from **219** to **238**. There were **680 new cases** (compared to **764 (adjusted)** new cases for the previous period) and **19** new deaths.

Recoveries as at **17 July** stood at **5896** and active cases at **3868** as compared to **4522** and **4590 (adjusted)** respectively on 10 July.

Active Cases [Active Cases are Confirmed Cases less recoveries, less deaths and less persons who tested positive and who might have left the country];

- ♦ There are **five (5) countries** with no active cases as at **17 July** as compared to **seven** on **10 July**. The countries with no active cases are:- **Anguilla, British Virgin Islands, Dominica, Grenada and Montserrat**. **St Kitts and Nevis and St. Vincent and the Grenadines** that were in this category in the last reporting period have active cases;
- ♦ **Four (4) countries**—**Cayman Islands (2), Saint Lucia (2), St Kitts and Nevis (2) and Trinidad and Tobago (4)** have 1-4 active cases;
- ♦ **Three (3) countries**—**Barbados, Bermuda, and St Vincent and the Grenadines** each with 6, have 5-10 active cases;
- ♦ **Three (3) countries**—**Antigua and Barbuda (16), Belize (15) and The Bahamas (25)** have 11-25 active cases;
- ♦ **Two (2) countries**—**Jamaica (56) and Turks and Caicos Islands (61)** have between 50– 100 active cases;
- ♦ **Guyana (145)**, has between 100-150 active cases;
- ♦ **Suriname has 324** active cases and **Haiti** now has **3197** active cases.

Recoveries

- ♦ As implied earlier, there are **five** countries for which all active cases have recovered as at **17 July**;
- ♦ Among the other countries, **Haiti** had **3606** recoveries, **Jamaica, 678, Suriname 600, Cayman Islands, 200, Guyana, 156, Bermuda, 137, Trinidad and Tobago, 124, Barbados, 91, The Bahamas, 91 and Antigua and Barbuda, 57.**

Confirmed Cases

- ♦ In absolute terms the countries with the highest numbers of Confirmed Cases are **Haiti, 6948, Jamaica, 768, Suriname, 943, Guyana, 320, Cayman Islands, 203, Bermuda, 152, Trinidad and Tobago, 136, The Bahamas 129, Barbados, 104, Antigua and Barbuda, 76 and Turks and Caicos Islands, 75;**
- ♦ In rates per 100,000 population for countries with 25+ cases, **Cayman Islands** has the highest rate with **308.45, Bermuda** is second with **237.60** followed by **Turks and Caicos Islands with 181.60, Suriname with 161.75, Antigua and Barbuda with 79.99 and Haiti, 60.89. Montserrat (under 25 cases)** has a rate of **220 (11 cases);**
- ♦ The rate for **Jamaica** is **28.16; Guyana, 43.18, St Vincent and the Grenadines, 31.53 and Barbados, 37.87.** [Please see Table 2 for rates for other countries].

Deaths

- ♦ **Haiti** has the highest number of deaths as at **17 July** with **145**, an increase of **15** from 10 July. **Suriname and Guyana each with 19** are in joint second place. **The Bahamas** follows with **11 deaths and Jamaica** with **10.**
- ♦ The number of deaths per 100,000 population is the highest in **Montserrat 20 (1); Bermuda 14.07 (9), Turks and Caicos Islands, 4.84 (2). British Virgin Islands is at 3.43 (1) and Suriname 3.26 (19).** The rate for Haiti is **1.27;**
- ♦ The Case Fatality Rate (*number of deaths as a percentage of the number of confirmed cases*) is the highest in the **British Virgin Islands** with **12.5** percent, followed by **Montserrat with 9.1, The Bahamas** with **8.5** percent, **Barbados** is at **6.7** percent and **Bermuda, Guyana and Trinidad and Tobago** each are at **5.9** percent. **Haiti** is at **2.1** percent,

Testing- [Tracking the pandemic]

- ♦ **Cayman Islands** continues to have the best testing record with a rate of **41,932.4 tests per 100,000 population (27,597 tests)** followed by **Bermuda, 23,625.6 (15,114 tests), Barbados, 3375.4 (9,270 tests), Anguilla, 2533.3 (380 tests)** and **Turks and Caicos Islands, 2370.5 (979 tests).** **Jamaica** has conducted the highest number of tests with **29,563** but is in **tenth place with 1083.9 tests per 100,000 population.**

Special Topic Bulletin - COVID 19

CHART 1: SUMMARY ALL COUNTRIES - NUMBER OF CONFIRMED CASES, NEW CASES AND DEATHS – 10 MARCH - 17 JULY 2020

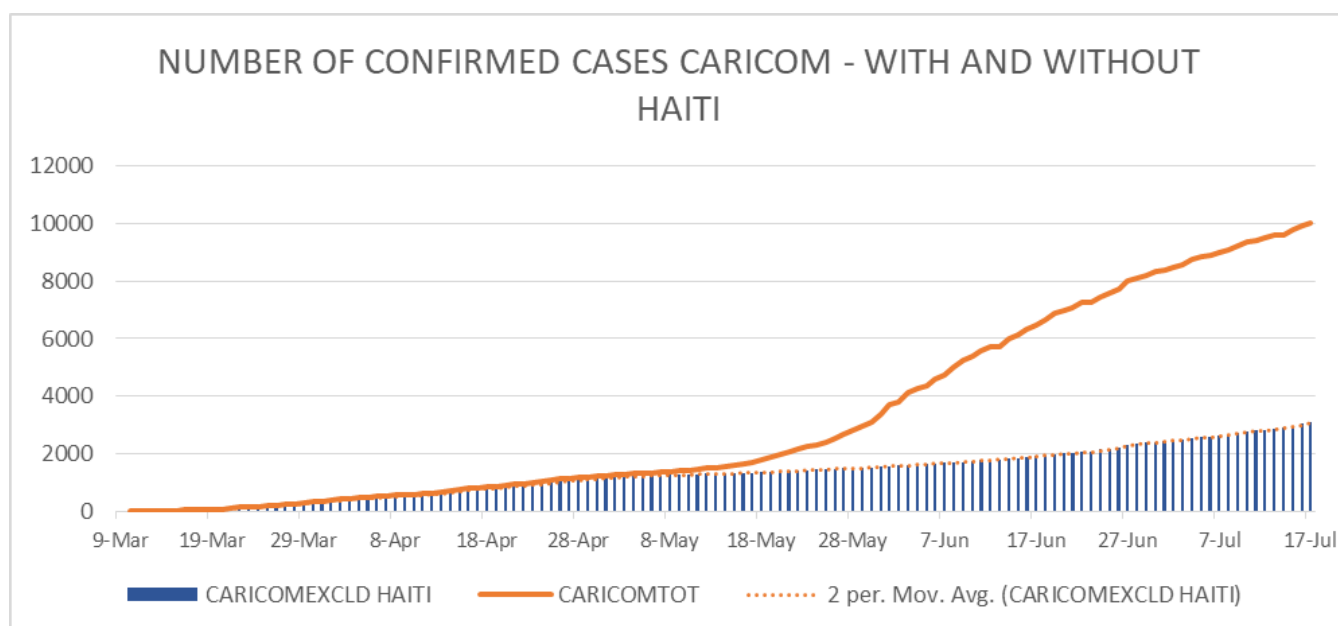

CHART 1A: NUMBER OF CONFIRMED CASES IN CARICOM- WITH AND WITHOUT HAITI AS AT 17 JULY 2020

Note: The number of confirmed cases moved from 9352 (adjusted) as at 10 July to 10,032 as at 17 July, while the number of deaths moved from 219 to 238.

Special Topic Bulletin - COVID 19

**CHART 1B: SUMMARY ALL COUNTRIES - NUMBER OF NEW CASES -
10 MARCH - 17 JULY 2020**

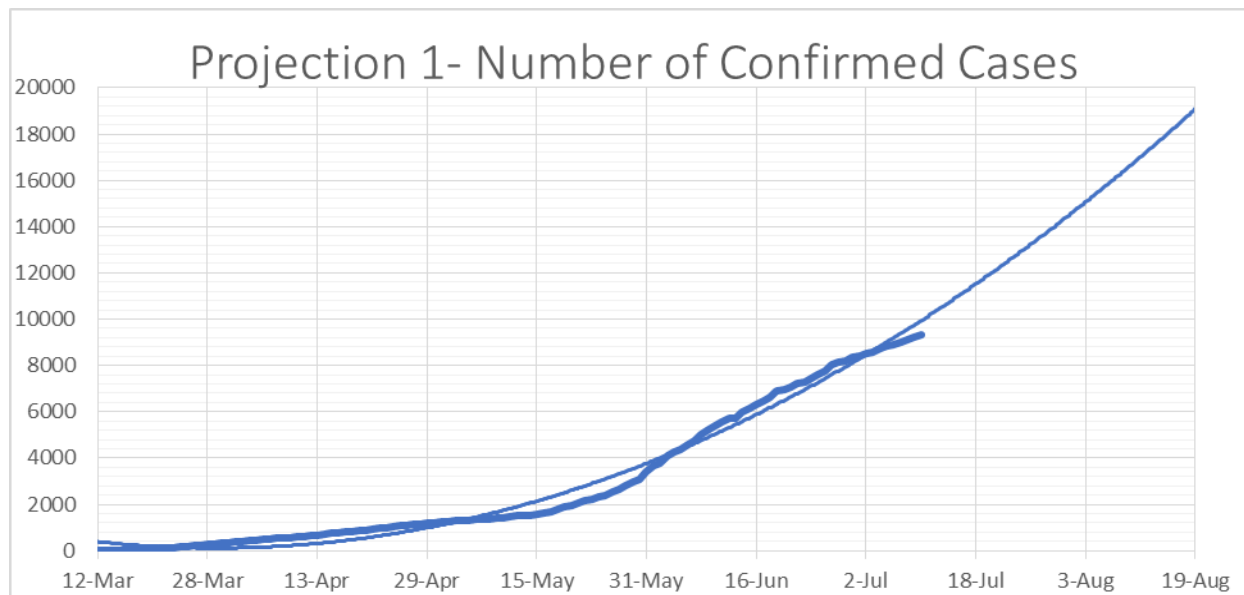

**CHART 1C: SUMMARY ALL COUNTRIES - NUMBER OF NEW CASES - WITH AND
WITHOUT HAITI - 10 MARCH - 17 JULY 2020**

Note: Total number of new cases for the period **11-17 July** is **680** as compared to **764 (adjusted)** during **4-10 July**, **27 June-3 July** with **840**, **20-26 June** with **853 (adjusted)** and **13-19 June** with **1167**. The number of new cases for the current reporting period is **84** less than for the previous reporting period. Haiti contributed to **366** of the new cases this reporting period or **53.8** percent (**63** percent for the previous period). **Jamaica** contributed to **15** new cases, **Suriname**, **217**, **Guyana**, **30** and **The Bahamas**, **21**. The trend in the number of new cases continues to decline over time for the total number of new cases, with Haiti's contribution to the total number of new cases for CARICOM also reflecting a declining trend as seen in Chart 1C.

Special Topic Bulletin - COVID 19**CHART 1D: SUMMARY ALL COUNTRIES - NUMBER OF DEATHS -
10 MARCH - 17 JULY 2020**

**CHART 2: PROJECTION 1-ESTIMATED NUMBER OF CONFIRMED CASES
EXTENDED TO AUGUST 2020**

Note: The non-linear trendline gave a projected value for 17 July of 10,600. The actual value is 10,032, which shows a relatively close fit of the trendline. The projected value for 24 July is 12,100.

**CHART 2A: UPDATED PROJECTION USING GROWTH RATES (13-19 JUNE)
OF THE NUMBER OF CONFIRMED CASES PROJECTED UP TO
AUGUST 2020**

Note: The projected value for 17 July from this projection was 10724. The actual value is 10,032, which is relatively close. The projected value for 24 July is 12,240.

Special Topic Bulletin - COVID 19

CHART 2B: PROJECTION BASED ON 50 DAY DOUBLING PERIOD- UP TO 29 AUGUST 2020- FITTED WITH ACTUAL VALUES

Note: The projected value for **17 July** is **10,656** as compared to the actual value of **10,032**, which is relatively close. The projected value for **24 July** is **11,950**.

Special Topic Bulletin - COVID 19

SUMMARY OF CONFIRMED CASES AS AT 17 JULY 2020

SUMMARY OF DEATHS AS AT 17 JULY 2020

Country	Number of Deaths
Haiti	145
Guyana	19
Suriname	19
The Bahamas	11
Jamaica	10
Bermuda	9
Trinidad and Tobago	8
Barbados	7
Antigua and Barbuda	3
Belize	2
Turks and Caicos Islands	2
British Virgin Islands	1
Cayman Islands	1
Montserrat	1
Dominica	0
Grenada	0
Saint Lucia	0
St. Kitts and Nevis	0
St. Vincent and the Grenadines	0
Anguilla	0

Total Deaths: 238

Note: The number of confirmed cases in Haiti is 6948, now more than 7 times the number of confirmed cases for Suriname that has now moved to second place, passing Jamaica during the current reporting period. Jamaica is in third place, 175 cases behind Suriname with Guyana still in fourth place. Haiti with an additional 15 deaths, Suriname with 1 additional death and Guyana with 3 are the countries that have contributed to the increase in deaths for the reporting period. Guyana has joined Suriname with the second highest number of deaths, 19.

British Virgin Islands	8	7	0	439	0
Anguilla	3	3	0	380	0
Total	10032	5896	3868		

Note: The table is sorted by descending order of recoveries.

All active cases in **Anguilla, British Virgin Islands, Dominica, Grenada and Montserrat** have recovered up to the end of the reporting period **17 July**.

St Kitts and Nevis and St Vincent and the Grenadines that previously had no active cases up to the **3 July** and the **11 July** respectively, now have **2 and 6 active cases** respectively.

Cayman Islands has **3** active cases. **Trinidad and Tobago** (with a prior period of no active cases) has **4** active cases. **Barbados and Bermuda**, which had no active cases during the period 27 June– 3 July, each have **6** active cases.

Antigua and Barbuda and **Belize** each have **16 active cases** while **The Bahamas** is at **25** active cases.

Turks and Caicos Islands and Suriname that previously had no active cases in prior reporting periods now have **61** and **324** active cases, respectively.

Twelve countries have less than 10 active cases from thirteen at the end of the previous reporting period.

Grenada	853	765.2
Guyana	3558	480.2
Haiti	15270	133.8
Jamaica	29563	1083.9
Montserrat	62	1240.0
Saint Lucia	2140	1195.5
St Kitts and Nevis	713	1345.3
St Vincent and the Grenadines	1269	1143.2
Suriname	1244	213.4
The Bahamas	2570	674.0
Trinidad and Tobago	5998	441.3
Turks and Caicos Islands	979	2370.5

Note: The top five countries based on the number of tests per 100,000 are: **Cayman Islands (41,923.4)**, **Bermuda, (23,625.6)**, **Barbados (3,375.5)**, **Turks and Caicos Islands (2,370.5)** and **Anguilla (2,533.3)** in that order.

It is not known whether these tests are a mix of Rapid Tests and PCR or [Polymerase Chain Reaction testing](#). Wherever this is known, the Rapid Tests are removed from the total number of tests conducted. However, a few countries have been able to obtain PCR-based testing equipment from other countries such as the United Kingdom.

TABLE 6: APPROXIMATE MODE OF TRANSMISSION - SELECTED COUNTRIES AS AT 17 JULY 2020

Country	Imported Transmission 	Local Transmission 	Community Transmission 	Under Investigation 
Trinidad and Tobago	104 ^e	24	1	7
Guyana	4 ^e	316 ^e	0	0
Bermuda	48	85	18	1
Jamaica	247	475	44	2
St. Vincent and the Grenadines	29	6	-	-
Belize	15	25	-	-
Antigua and Barbuda	55	21		

Note: There are differences in the classification of mode of transmission. Community transmission, which according to international guidelines, reflects in part “Local Transmission” with no epidemiological Link is not used. In the case of Jamaica, approximately 236 cases from a work place cluster is placed under local transmission. Turks and Caicos Islands was inadvertently listed in Issue 15 as having 53 Imported and 15 Local Transmission instead of Antigua and Barbuda. The 21 cases listed by Antigua and Barbuda is classified as non-imported. Please see Issue 2 for explanations on Mode of Transmission.

TABLE 7: CONFIRMED CASES BY SEX - SELECTED COUNTRIES AS AT 17 JULY 2020

Country			Not Stated
Haiti	4120	2828	
Jamaica	337	431	
Guyana	166 ^e	154 ^e	
Cayman Islands	106	97	
Bermuda	65	87	
Trinidad and Tobago	46	63	27
Barbados	46	58	
Belize	19	21	

CHART 6: ANTIGUA AND BARBUDA**CHART 6A: ANTIGUA AND BARBUDA**

Note: Antigua and Barbuda had **2 new cases** during **11-17 July**, as compared to **6 new cases** during **4-10 July**. The total number of cases stood at **76** as at **17 July**, with **16 active cases**.

Special Topic Bulletin - COVID 19

CHART 7: THE BAHAMAS

CHART 7A: THE BAHAMAS

Note: The Bahamas had **21 new cases** during **11-17 July** as compared to **4 new cases** during **4-10 July**. The number of confirmed cases increased to **129** as at **17 July**, with **25 active cases** as compared to **8** the previous reporting period.

CHART 7B: THE BAHAMAS

Special Topic Bulletin - COVID 19

CHART 8: BARBADOS

CHART 8A: BARBADOS

Note: Barbados had **6 new cases** during **11-17 July**, mainly due to returning nationals, There was **one new case** during the period **4-10 July** after having **no new cases** during the previous two reporting periods. The number of confirmed cases stood at **104**. Barbados now has **6 active case** as at **17 July** after having **one active case** as at **10 July** and no active cases during the period **26 June -7 July**.

CHART 9: BELIZE

CHART 9A: BELIZE

Note: Belize had **3 new cases** during **11-17 July** as compared to **7 new cases** during **4-10 July**. The number of cases stood at **40** as at **17 July**, with **16** active cases.

CHART 10: DOMINICA**CHART 10A: DOMINICA**

Note: Dominica had no new cases of COVID-19 during the current reporting period **11 -17 July**. The last new case/ cases occurred on **1 June**, a period of **46 days** up to **17 July**. The number of cases stood at **18** as at **17 July**. Dominica has been at no active cases since **13 June**.

CHART 11: GRENADA**CHART 11A: GRENADA**

Note: There were **no new cases** in Grenada during **11-17 July** similar to the past three reporting periods. The last new case occurred on **25 May**, a period of **53 days** up to **July 17**. The number of cases stood at **23** as at **10 July**. Grenada had no active cases since **18 June**. There were three Trinidad and Tobago nationals that tested positive when they returned from Grenada to Trinidad and Tobago during the last reporting period.

CHART 12: GUYANA

CHART 12A: GUYANA

Note: In Guyana, there were **30 new cases** during **11-17 July** as compared to **34 new cases** during **4-10 July** and **26 new cases** during **27 Jun -3 July**. The number of confirmed cases for Guyana increased to **320** as at **17 July**.

CHART 12B: GUYANA

Special Topic Bulletin - COVID 19

CHART 13: HAITI

CHART 13A: HAITI

Note: There were **366 new cases** in Haiti during **11-17 July** as compared to **481 new cases** during, **4-10 July**, **627 new cases** during **20-26 June**, **975 new cases** during **13-19 June** and **1201 new cases** during **6-12 June**. The **366 new cases** represented a reduction of **115 new cases** from the last reporting period. The total number of cases for Haiti stood at **6948** as at **17 July**. The **general decreasing trend** in the number of new cases from about **13 June** continues to the current reporting period.

CHART 13B: HAITI**CHART 13C: HAITI**

Special Topic Bulletin - COVID 19

CHART 14: JAMAICA

CHART 14A: JAMAICA

Note: Jamaica had 15 new cases during the period 11-17 July as compared to 34 new cases during 4-10 July, 35 new cases during 27 June -3 July, 34 new cases during 20-26 June and 38 new cases during 13-19 June. The total number of confirmed cases stood at 768 as at 17 July. Jamaica has exhibited a significant number of recoveries and also some repatriation of cases to other countries, The number of active cases in Jamaica is 56 as at 17 July.

CHART 15: MONTSERRAT**CHART 15A: MONTSERRAT**

Note: There were **no new cases** in Montserrat since **13 April**, a period of **95 days up to 17 July**.

Special Topic Bulletin - COVID 19

CHART 16: SAINT LUCIA

CHART 16A: SAINT LUCIA

Note: There was **one new case** in Saint Lucia during **11-17 July** as compared to **no new cases** during **4-10 July**. The number of cases stood at **23** as at **17 July**.

CHART 16B: SAINT LUCIA

Special Topic Bulletin - COVID 19

CHART 17: ST. KITTS AND NEVIS

CHART 17A: ST. KITTS AND NEVIS

Note: St. Kitts and Nevis experienced **no new cases** during the period **11-17 July** but had **2 new cases (adjustment)** during the period **4-10 July** after a very long period (**over 80 days**) with no new cases. The first case was that of a returning national while the other was a frontline worker that came into contact with this patient. The number of cases was 17 as at 17 July.

CHART 18: ST. VINCENT AND THE GRENADINES**CHART 18A: ST. VINCENT AND THE GRENADINES**

Note: There were **6 new cases** in St Vincent and the Grenadines during **11-17 July** as compared to **no new cases** for the previous three reporting periods. The number of cases in St Vincent and the Grenadines was **35** as at **17 July**. St Vincent and the Grenadines now have **6** active cases that are primarily returning nationals.

CHART 18B: ST. VINCENT AND THE GRENADINES

Special Topic Bulletin - COVID 19

CHART 19: SURINAME

CHART 19A: SURINAME

Note: Suriname had **217 new cases** during **11-17 July**, **32 percent of the total new cases** for **CARICOM** and as compared to **165 new cases** during **4-10 July** and **170 new cases**, **27 June-3 July**. The number of confirmed cases for Suriname stood at **943** as at **17 July**, after a long period at 10 cases. The increasing trend in the number of new cases is reflected in Chart 19 A.

CHART 20: TRINIDAD AND TOBAGO –TOTAL CONFIRMED CASES**CHART 20A: TRINIDAD AND TOBAGO**

Note: Trinidad and Tobago had **3 new cases** during **11-17 July** after another **3 new cases** during **4-10 July** . The last two sets of new cases were repatriation of nationals that were crew members from cruise liners as well as from a CARICOM Member State. The number of confirmed cases stood at **136** as at **17 July**. The new cases that tested positive on arrival highlights the importance of testing in the strategy to overcome the pandemic.

CHART 20B: TRINIDAD AND TOBAGO - CRUISE PASSENGERS

Special Topic Bulletin - COVID 19

CHART 21: ANGUILLA

CHART 21A: ANGUILLA

Note: The last positive case of COVID-19 in Anguilla was **2 April**, a period of **106 days** as at **17 July**.

CHART 22: BERMUDA

CHART 22A: BERMUDA

Note: Bermuda had **2 new cases** during the current reporting period **11-17 July** as compared to **4 new cases** during **4-10 July** and **no new cases** for the previous two reporting periods. The number of confirmed cases for Bermuda stood at **152** as at **17 July**.

CHART 23: BRITISH VIRGIN ISLANDS**CHART 23A: BRITISH VIRGIN ISLANDS**

Note: There were **no new cases** in the British Virgin Islands during **11-17 July** similar to the past five reporting periods. The last positive case was on **14 May**, a period of **64 days** as at **17 July**. The total number of confirmed cases for British Virgin Islands stood at **8** as at **17 July**.

CHART 24: CAYMAN ISLANDS**CHART 24A: CAYMAN ISLANDS**

Note: There were **2 new cases** in Cayman Islands during **11-17 July** as compared to **no new cases** during **4-10 July** and **5 new cases** during **27 June- 3 July**. The number of confirmed cases stood at **203** as at **17 July**. Cayman Islands leads all countries in the Number of Tests conducted per 100,000 population and has detected a number of asymptomatic persons in the 203 cases that have tested positive.

CHART 25: TURKS AND CAICOS ISLANDS**CHART 25A: TURKS AND CAICOS ISLANDS**

Note: Turks and Caicos Islands had 6 new cases during 11-17 July less than the 25 new cases (adjusted) during 4-10 July and the 28 new cases during 27 June- 3 July. The number of cases stood at 75 as at 17 July.

Special Topic Bulletin - COVID 19

TABLE 8: TREND IN DOUBLING TIME –CARICOM AND SELECTED COUNTRIES

COUNTRY	PERIOD	NO. OF CASES	NO. OF DAYS
ALL COUNTRIES			
	31 May 19 June	3395 6895	19
	25 Apr 19 June	992 1979	55

DOUBLING OF CONFIRMED CASES IN SELECTED COUNTRIES

Guyana

Doubling (2.01) 36 days

Haiti

Approx. Doubling (2.08) 39 days

Suriname

Doubling (2.02) - 20 days

DOUBLING OF CONFIRMED CASES IN SELECTED COUNTRIES

Cayman Islands

Approx. Doubling (2.2) 60 days

**Turks and Caicos Islands**

Doubling (1.8) 19 days

TABLE 9: EXPLANATIONS

Key Term/Issues	Explanation
Data on Testing	<p>Testing for the occurrence of COVID-19 provides an understanding of the pandemic. It tells us how the virus is spreading. Testing should be able to tell us about the total number of cases or persons infected. However given the availability or lack thereof of equipment for testing and the establishment of protocols in many countries that invariably implies that persons should fulfil stated criteria to qualify to be tested, it is likely that the total number of cases are unknown.</p> <p>This data set on testing has increasingly become available for most CARICOM countries with some countries consistently reporting this information. A possible difference in the data is that the tests are performed in different testing laboratories across countries. In some cases testing is done for countries or validated by the Caribbean Public Health Agency (CARPHA) while in other cases they are conducted at national laboratories. Another difference is that tests may include repeated testing for confirmed cases to determine whether these persons have recovered. It is also possible that different types of tests are being reported.</p> <p>Why is data on testing needed?</p> <p>The simple answer is that without data on tests conducted on the COVID-19 we cannot possibly understand how the pandemic is progressing, and which contacts to trace and to quarantine.</p>
Projections	<p>The projections in this and previous Issues largely rely on using observed doubling rates, the rates of change of the latest period of data (prior to the estimation) or using fitted trend lines. No sophisticated modelling has been utilised.</p> <p>For example in the case of Chart 2, a linear projection is undertaken and the equation of that straight line is given as follows:</p> $y = -103.42 + 25.045 x$ <p>Where y represents the number of confirmed cases and x the number of time periods from the commencement of the first case.</p> <p>Simply put, it is possible to use this equation to obtain predicted values. Assuming that it is necessary to calculate the number of predicted cases on the 29th April as per the linear trend, the number of time periods (x- value) from the 10 March is roughly 50 so the predicted value works out as follows:</p> $y_p = -103.42 + 25.045 \times 50 = 1252.25 - 103.42 = 1148.83.$ <p>The actual value for this same period is 1178 confirmed cases.</p>

TABLE 9: EXPLANATIONS

Key Term/Issue	Explanation
Number of Cases per 100, 000 population	<p>The number of cases per 100,000 population is calculated by dividing the number of cases by the total population, and then multiplying the result by a standard population size in this case 100,000.</p> $Rate = \frac{No. of Confirmed Cases}{Total Population} \times 100,000$ <p>It is useful for comparing countries/regions of varying population sizes</p> <p>For very small values/small populations these rates may be unstable.</p>
