PREFACE

This National Accounts report is the sixth to be prepared by the Statistics Sub-programme of the Information and Communication Division and is to be published every two years. However, it is hoped that during this interval, data compiled from Member States will be available on our Web page. The last two reports contained data for the period 1980 – 1994 and 1980 – 1996. Data for The Bahamas at current prices for the period 1990 – 1995 are provisional while no data were available at Constant prices.

The main purpose of this National Accounts report is to provide in a single publication a compilation of statistics for the CARICOM region covering the economic conditions and performance as reflected in the Gross Domestic Product over a ten-year period. Most of the data presented were submitted by the National Statistical Offices or were extracted from national and/or sub-regional reports. More specifically the report presents:

- the total real GDP of CARICOM at constant prices;*
- the growth rates of GDP;*
- the industry profile of each country's GDP at current and constant prices;*
- the profile by expenditure components of GDP*
- Key national account aggregates for selected countries*

The report presents data in Eastern Caribbean dollars (\$EC) and in national currency at constant and current prices. Due to problems associated with the official changes in the exchange rates to the \$EC data on percentage changes at current prices are presented only in national currency. This issue is discussed later in this preface. A few key selected summary statistics such as per capita GDP and the summary of GDP for all Member States are also presented in United States dollars (\$US).

The absence of presenting percentage changes at current prices based on \$EC is due to uncoordinated changes between prices and exchange rates for some member states. This conversion renders the comparison of current prices among countries or current and constant prices of the same country meaningless. In the case of constant prices a mechanical rebasing of

the constant price data to a chosen base year (1990 for this report), does not result in transformation of the growth rates in national currency.

This rebasing method is however not the ideal approach and is as best an approximation. The ideal situation is the rebasing of the GDP using deflators/ extrapolators that are available at the national statistical offices. However, in a situation in which there has been traditionally a total lack of harmonization in the choice of base years throughout the region, it is necessary to perform this mechanical rebasing of the constant price data as was done in this report to achieve some semblance of comparability.

In current prices the conversion of GDP from national currencies to a common currency through the use of official exchange rates is a less than satisfactory solution due to the possibility of wide fluctuations between the national currencies and a common currency such as \$EC. The use of Purchasing Power Parity is one approach that seeks to eliminate the discrepancy that can arise in the interpretation of GDP using nominal exchange rates conversion, allowing for more realistic CARICOM level total aggregates that cover for distortions due to relative prices across countries.

The PPP approach converts the GDP of different countries to a numeraire of another country. This approach corrects the differences in prices across countries including the exchange rate as a price variable. The use of the nominal exchange rate to convert GDP of one country to another assumes that the price structures of both countries are identical and that the goods being traded are also similar. The conversions of GDP using the PPP method provides more accurate and reliable inter-spatial estimates enabling the aggregation of national estimates to regional and international estimates. However, the data requirements of detailed price and expenditure data are often quite enormous and are often not available.

The national account data presented in this report uses the data available from the national statistical offices as an authoritative source of information. In specific cases, countries will flag preliminary or crude estimates usually for the latest available years. In other instances, the identification of excessively high changes in variables, irregular fluctuations, lack of

agreement of identical country totals (GDP by expenditure and industry), valuation problems and other similar irregularities are noted in the course of the evaluation and analysis of the data at the CARICOM level. In some cases, however, there are no ready short-term solutions to ascertain whether the outlying values are anomalies or not. Further analysis and use of the data will undoubtedly highlight more questions that need to be addressed.

The issue of timeliness in national accounts is a major concern to this office and of course to the users of the data. One of the main issues here is that national accounts by industry and expenditure components are normally available after a two to three year lag during which time the survey data of establishments which is used as the main foundation for compiling the industry estimates are being collected and processed, i.e. the financial accounts are available in successive years. To offset this lag it is necessary, perhaps, to establish throughout the region procedures to compile quarterly GDP to enable the availability of information in short-term movements in GDP that can guide policy makers.

In the context of relevance it is necessary to provide for the production and dissemination of the following area: National Disposable Income, Savings, Net lending and in general the consolidated accounts of the nations as well as movements towards the production of Supply and Use Tables and Institutional Accounts. Expansions into these areas will of necessity have implications for the relevance of the national accounts in the assessment of the economic and social conditions of Member States and the policies that countries should pursue. Evidently, the combination of data comparability, timeliness and reliability all create a package of national accounts that can be considered to be relevant to Member States and of an acceptable quality. Movement towards these goals will of course have implications for the systems and methodologies in place to compile national account statistics at both the regional and national levels. In this vein, the CARICOM Secretariat welcomes any suggestions from users and producers that will guide us in improving the national accounting framework as reflected in this report.

ACKNOWLEDGEMENTS

The CARICOM Secretariat thanks the National Census Offices of Antigua and Barbuda, The Bahamas, Barbados, Belize, Dominica, Grenada, Guyana, Jamaica, Montserrat, St Kitts and Nevis, Saint Lucia, St Vincent and the Grenadines, Suriname and Trinidad and Tobago for supplying the data used to compile this report.

Special thanks to the staff of the Statistics Sub-Programme for producing this report.

CONCEPTS AND DEFINITIONS

1. GROSS DOMESTIC PRODUCT:

A key aggregate of the system of National Accounts is the Gross Domestic Product. The Gross Domestic Product (GDP) of an economy is the total value of all goods and services produced by all institutional units resident in the economy within a given time period, usually one year. It includes the allowance made for the consumption of fixed capital.

Gross value added is a measure of GDP in which a principal consideration is that duplications must be avoided which is achieved by deducting from the output of each producing unit the value of the inputs of goods and services received from other units, at home or abroad. i.e. GDP can be derived as the *sum of the value added* of resident institutional units in an economy. This measure of GDP is also identical with the *sum of the final expenditures* on consumption, on gross capital formation and adjusted for exports *less* imports of goods and services. GDP is also equal to the *sum of the incomes* accruing from production which includes compensation of employees, consumption of operating surplus and fixed capital.

2. GROSS NATIONAL INCOME/PRODUCT (GNI/GNP):

Gross National Income (GNI) is equal to GDP less primary incomes payable to non-resident units plus primary incomes receivable from non-resident units. In the 1993 System of National Accounts (SNA), GNP is synonymous with GNI emphasising the fact that it is not so much a “national” versus “domestic” measure but that it is actually an *income* concept. GNI (GNP) is the aggregate value of the gross balances of primary incomes for all industries. The primary income components are taxes (less subsidies) on production and imports, compensation of employees and property income in *all* cases payable/ receivable to/from the rest of the world.

3. THE GROSS OUTPUT OF INDUSTRIES:

Gross output is the value of goods and services produced within an accounting period adjusted for changes in stocks of finished goods and work-in- progress. Output consists of goods and services that are produced within an establishment that are disposed of in one of the following ways:

- (a) *Market output* which includes the total value of all goods and services sold on the market, bartered, used for payments in kind, supplied by one establishment to another belonging to the same market enterprise and the total value of changes in inventories of finished goods and work-in-progress intended for all these uses mentioned herein.

- (b) Output for *own final use* which includes goods and services that are retained for their own final use by the owners of the establishments within which they are produced, the total value of fixed assets produced by an establishment that are retained within the same enterprise for use in future production and the total value of changes in inventories of finished goods and work in progress intended for one of the uses contained herein.
- (c) Other *non-market output* includes goods and services that are provided free or at prices that are not economically significant. Common examples are the goods and services produced by government units or by non-profit units serving households (NPISHs) such as education and health services.

4. INTERMEDIATE CONSUMPTION:

Intermediate consumption consists of the value of non-durable goods and services consumed as inputs by a process of production. The value of all goods and services that are used as inputs into ancillary activities such as accounting, marketing etc. are included as intermediate consumption. The consumption of fixed assets is excluded from intermediate consumption as well as purchases of valuables (capital account). In addition goods and services that are produced within the same establishment and fed back as inputs into production within the same establishment are not recorded as intermediate consumption.

5. CONSUMPTION OF FIXED CAPITAL:

Consumption of fixed capital is defined as the decline during the accounting period in the current value of the stock of fixed assets owned and used by a producer. This decline in the fixed assets can be due to physical deterioration, normal obsolescence, or accidental damage and excludes the damage caused by acts of war and other such exceptional events. Consumption of fixed assets should be considered a cost of production. The inclusion of this item in value added gives rise to the *gross* concept of GDP with the inclusion allowing for a *net* measure of value added and GDP.

6. VALUATION OF GDP

Outputs and inputs can be valued in the following ways:

Basic prices

The basic price is the amount receivable by the producer from the purchaser of a unit of a good or service produced as output minus any tax payable and plus any subsidy receivable on that unit, as a consequence of its production or sale. It excludes any transport charges invoiced separately by the producer.

Producers' prices

The producers' price is the amount receivable by the producer from the purchaser for a unit of a good or service produced as output minus any value added (VAT) or similar deductible tax, invoiced to the purchaser. It excludes any transport charges invoiced separately by the producer.

Purchasers' price

The purchasers' price is the amount paid by the purchaser, excluding any deductible VAT or similar deductible tax, in order to take delivery of a unit of a good or service at the time and place required by the purchaser. It includes any transport charges paid separately to take delivery at the required time and place.

The above valuation concepts are in-keeping with the recommendations of the 1993 SNA. Output can be measured either at basic or producers' prices. Intermediate inputs should be valued at purchasers' prices.

Commonly used valuation concepts in the CARICOM Region are at market prices and factor costs. Valuation of GDP at *factor costs* excludes all taxes on products and is therefore obtained by deducting taxes (less subsidies) on production from market prices. Essentially, gross value added at factor cost is a measure of income since it represents the amount left over from gross value added for distribution after the payment of all taxes and receipt of all subsidies. This concept of factor cost perhaps, approaches that of Basic prices given earlier.

GDP at *Market Prices* is equal to GDP at factor cost plus taxes less subsidies on production and imports.

7. TAXES ON PRODUCTION AND IMPORTS

Taxes are compulsory unrequited payments in cash or in kind made by institutional units to government units. Taxes on production and imports consist of:

- taxes on products payable on goods and services when they are produced, sold and otherwise disposed of by their producers;
- other taxes on production comprising taxes on ownership/use of land, buildings or other assets used in production or on the labour employed or on the compensations paid to employees.

These taxes are recorded as being payable out of the gross value added. The term indirect tax which was formally used is no longer commonly used in the 1993 SNA. Indirect taxes which correspond corresponding to the taxes on production and income are compulsory payments to Government which industries treat as part of the cost of production. They include import and export

duties, excise, sales, entertainment and turnover taxes, real estate and land taxes, levies on value added and the employment of labour (but not social security contributions), motor vehicles, driving tests, licenses, airport and passport fees when paid by producers.

8. SUBSIDIES

Subsidies are current unrequited payments that government units, including non-resident government units, make to enterprises on the basis of the levels of their production activities or values of the goods and services they produce, sell or import. They are receivable by resident producers or importers and may be designed to influence the levels of production, the prices at which outputs are sold or the remuneration of the institutional units engaged in production. Subsidies are not payable to final consumers. Current transfers that government make to households are treated as social benefits. In effect, subsidies are treated as *negative* taxes on production.

9. FINANCIAL INTERMEDIATION SERVICES INDIRECTLY MEASURED - IMPUTED SERVICE CHARGES

The imputed service charge, referred to as Financial Intermediation Services Indirectly Measured (FISIM) in the 1993 SNA, is an adjustment that is required to GDP to take into consideration the estimation of the output of some financial intermediaries that do not charge explicitly for all services provided. These services include the borrowing and lending of funds from/to different categories of borrowers and lenders while paying/charging different rates of interest. The net receipt of interest defrays the costs of providing these services (that are not individually charged) and also provides operating surplus for the intermediaries. This total value of FISIM is the net property income received by these intermediaries and should in principle be allocated as intermediates among the users of these services. Due to the difficulty in allocating FISIM, in practice, it is normally recorded as intermediate consumption of a nominal industry and deducted from GDP (Imputed Service Charge).

10. SELECTED EQUATIONS IN THE SYSTEM OF NATIONAL ACCOUNTS

(1) Gross Domestic Product (GDP) at market prices

= Output plus Taxes, less Subsidies, on products – Intermediate
Consumption

- (2) Gross Domestic Product (GDP) at Market Prices
 = Final Consumption Expenditure plus Changes in Inventories plus Gross fixed capital formation plus Acquisition less Disposal of valuables plus Exports of Goods and Services less Imports of Goods and Services
- (3) Gross National Income (GNI which is equivalent to GNP) = GDP at Market Prices plus Taxes, less Subsidies, on Production and Imports (net receivable abroad) plus compensation of employees (net, receivable abroad) plus Property Income (net receivable abroad)
- (4) Net National Income (NNI or equivalent to NNP) at Market Prices
 = GNI at Market Prices less consumption of fixed capital
- (5) Net National Disposable Income (NNDI) = NNI at Market Prices plus Current Taxes on income, wealth etc. (net receivable from abroad) plus social contributions and benefits and other Current Transfers (net, receivable from abroad)
- (6) Net National Disposable Income (NNDI) = Final Consumption Expenditure plus Adjustment for the change of net equity of households on Pension funds (net receivable from abroad) plus Saving, net.

11. NATIONAL ACCOUNTS AT CONSTANT PRICES:

For analytical purposes, the National Accounts at Constant Prices are derived by breaking current values down into a price component and a quantity component. For the purposes of deriving constant price estimates of GDP, a base year is selected which is deemed to be a normal year. Estimates at Constant Prices are usually derived by deflating the current year's values by price indices or by extrapolating the base year values by appropriate volume indices. Both methods are equivalent to expressing current period quantities at base period prices.

12. COMPILATION PRACTICES

The main practices used to compile National Accounts are the Production, Income Expenditure and the Commodity Flow approaches. The conceptual bases of these approaches are as follows:

- ❖ The *production* approach uses establishments as the basic reporting units and groups them into production activities. The sources of data are normally surveys or censuses of establishments, agriculture and similar sources, business accounts of enterprises and administrative records. Total output and intermediates are compiled from which the value added is estimated. Estimates are adjusted for the output of financial intermediation. The production data are also to be reorganised by institutional sectors.
- ❖ In the *expenditure* approach elements of expenditure as illustrated in the equations highlighted earlier are estimated. Imports and exports, usually measured, freight on board (f.o.b.), are estimated from the data on foreign trade and balance of payments statistics. Data on government's final expenditure are obtained from the records of government's revenue and expenditure. Gross capital formation comprises gross fixed capital formation, changes in inventories and acquisitions less disposals of valuables. The sources of data for gross capital formation are surveys and administrative records.
- ❖ The *income* approach derives independent estimates of compensation of employees, operating surplus, gross fixed income, and taxes less subsidies on production. Sources of data are similar to the expenditure aggregates.
- ❖ The *commodity flow* approach incorporates the three approaches described above and uses as a basis the Supply and Use Tables (SUT). The supply table, which shows the value of different products that are produced by each industry as well as imports, and the use table, shows the use of every product in the economy including exports. The basic principle is that the supply of every product must be equal to the use of that product at the level of the economy. The method therefore entails the compilation of product or commodity flows. Sources of data are derived from those of the other approaches.

13. GOVERNMENT'S FINAL CONSUMPTION EXPENDITURE

This is defined as expenditure including imputed expenditure, incurred by general government on both individual consumption of goods and services as well as on collective consumption (e.g community services such as security). Government's expenditure is largely financed out of taxation and other government's revenues. Government's final consumption expenditure may be classified according to its purpose or function such as Education, Health, General Administration and so forth.

14. PRIVATE FINAL CONSUMPTION EXPENDITURE:

This component of GDP is defined as the outlays of households on new durable and non-durable goods and services less their net sales of second-hand goods, scraps and waste. Purchases of dwellings are treated as gross fixed capital formation of the real estate industry. The imputed rent of owner-occupied dwellings is a part of the gross output of the real estate industry and is also included in the final consumption expenditure of households.

15. GROSS CAPITAL FORMATION:

Gross capital formation consists of gross fixed capital formation, changes in inventories and acquisitions less disposals of valuables. Gross fixed capital formation in turn, consists of acquisitions of fixed assets less disposals plus certain additions to the values of non-produced assets. Fixed assets are produced assets that can be used repeatedly or continuously over a period of time of one year or more. The acquisitions of new assets also include major improvements and renovations to fixed assets that increase significantly their productive capacity. Non-produced assets consists of assets that are needed for production but have not themselves been produced. e.g. land and mineral deposits.

Changes in inventories are the market value at the owning establishment of the physical change during an accounting period in stocks of materials, supplies, work-in-progress except on construction projects, finished products, livestock raised for slaughter, merchandise held by resident industries in stock of strategic materials and emergency stocks of important products held by Government services. In practice, the closest feasible approximation may be the difference between the levels of these stocks at the beginning and the end of the period, both valued at approximate average prices ruling over the period.

Valuables are assets that are not used for production or consumption and are therefore held primarily as a store of value.

16. EXPORTS AND IMPORTS OF GOODS AND NON-FACTOR SERVICES

Exports and imports of goods and services consist of the transactions in goods and services of the residents of a given country with the rest of the world, and covers merchandise, transportation, travel, insurance and other non-factor services, such as various fees, rentals, royalties, gifts in kind, etc. Military equipment transferred between Governments may, however, go unrecorded. Expenditure abroad by residents such as tourists and other persons, seasonal workers, and diplomatic and military personnel stationed abroad are treated as imports. Similarly, expenditures in the domestic territory by non-residents are considered exports.

The valuation of exports and imports are free on board (f.o.b) which is the price at the frontier of the exporter after it has been loaded onto the carrier and also after payment of export taxes less receipt of

any rebates. In practice, some countries in the region record imports according to the convention of cost, insurance, freight (c.i.f) which is the valuation at the frontier of the importing country inclusive of the cost of transportation and insurance.

NATIONAL ACCOUNTS HIGHLIGHTS

1.CARICOM OVERVIEW

GDP IN CONSTANT PRICES

The GDP data are at Factor Cost for all countries except Trinidad and Tobago (Constant Market Prices), Jamaica (Producers' Prices) and The Bahamas (Current Market Price). No data was available for The Bahamas at Constant prices. This Member State is therefore not included in the CARICOM totals or in the analyses at this level unless otherwise indicated. As mentioned in the preface to this report the base years for estimates at constant prices have all been changed to 1990 where this was necessary.

At Constant Market Prices (1990 Base year) CARICOM's total GDP was \$EC 47,901.4 million in 1999, an increase of 3.2% over 1998. The overall rates of growth of GDP for the years 1995-99 for the CARICOM Region at constant prices are:

YEAR	% Δ CONSTANT PRICES
1995	2.5
1996	4.9
1997	2.4
1998	3.2
1999	3.2

Guyana experienced negative growth of GDP in 1998 of 1.7% as well as Jamaica and Montserrat with declines of 0.4% and 10.1% respectively. However Guyana's growth became positive in 1999 (3.0%) mainly through improved growth rates in Agriculture, Forestry and Fishing and the Manufacturing and Processing industries. In 1999 the growth rates of Jamaica (-0.4%) and Montserrat (-12.6%) remained negative. In 1999, Suriname and Montserrat were the other countries with negative growth rates of 0.8% and 12.6% respectively.

In fact Jamaica's growth rates have been negative from 1996-99. Manufacturing and Construction and Installation are two industries that have exhibited negative growth during the period 1996-99 in Jamaica

Montserrat also showed negative GDP growth for an extended period 1995-99. This trend perhaps reflected the general impact of the volcanic activity in this country. The GDP growth rates for Suriname showed an irregular pattern throughout the period 1990-99. This is reflected in the industry growth rates for Suriname where there were very high or low rates across specific industries.

For the year 1999, Grenada's growth rate of real GDP was the highest of all the countries with 7.5% followed by Trinidad and Tobago with 7.1%. In the case of Grenada this favourable growth was due to a general increase across most industries but specifically in Manufacturing (12.1%), Communications and Banking/Insurance each with 11.5% and Hotels and Restaurants with 11.2%. In Trinidad and Tobago the manufacturing industry (which in the ISIC classification incorporates the petroleum and natural gas refining and petrochemicals) was mainly responsible for the high growth rate along with Agriculture/Forestry/Fishing, Construction and Distribution Service. Belize also experienced high growth in 1999 (6.4%) with the main industries contributing to this growth being Agriculture (including Fishing), Construction, Finance and Insurance and Real Estate and Business Services.

A comparison of the overall real growth rates for the MDCs, LDCs and CARICOM for the last five years 1995-99 shows the following:

YEAR	MDCs	LDCs	CARICOM
1995	2.6	1.5	2.5
1996	5.2	2.4	4.9
1997	2.3	3.3	2.4
1998	3.2	3.5	3.2
1999	3.0	4.6	3.2

Growth of GDP in LDCs exceeded that of MDCs from 1997-99. This was mainly due to the negative growth in Jamaica whose contribution to CARICOM's total GDP is significant. There were also positive growth trends (with some fluctuations) in all LDCs with the exception of Montserrat.

Looking at the percentage contribution at constant prices for the period 1990-99, MDCs contributed approximately 87.8% of total GDP, with LDCs contribution being on average 12.2%. Trinidad and Tobago's contribution to total GDP at constant prices ranged from 34.1% in 1993 to 37.2% in 1999 and averaged 35.1% for the entire period. Jamaica was the next highest contributor to total GDP at constant prices with an average of 29.8% for 1990-99. Suriname's share of real GDP was 11.3% for the period 1990-99. The contribution of the OECS countries was approximately 9.6% for the same period, with Antigua and Barbuda and Saint Lucia averaging 2.4% and 2.5% respectively.

GROSS DOMESTIC PRODUCT PER CAPITA AT CONSTANT PRICES

In the absence of data for The Bahamas, Antigua and Barbuda had the highest real GDP per capita of all countries in 1999. This figure was \$EC 17,080.6 or \$US 6,326.1 (1999 mid-year population 70,856) which was followed by Barbados whose real GDP per capita was \$EC 16,228.3 or \$US 6,010.48 (1999 mid-

year population 267,100). Montserrat with the smallest population in 1999 of 4,770 had real GDP per capita of \$EC 12,645.7 or \$US 4,683.6.

Of the countries with population totaling over 400,000, in 1999 Trinidad and Tobago had a real GDP per capita of \$EC 13,817.8 or \$US 5,117.7 (1999 mid-year population 1,290,400), followed by Suriname with \$EC 13,809.4 or \$US 5,114.6 (1999 mid-year population 43,0261). Real GDP per capita for Jamaica was \$EC 4,904.5 or \$US 1,816.5 (1999 mid-year population 2,581,700) while Guyana had overall the lowest real GDP per capita at \$EC 1,640.2 or \$US 607.5 (1999 midyear population 770,584). In the case of Guyana this represented an increase in the real GDP per capita over 1990 (\$EC 1,030.6 or \$US 381.7 and population 749,900) and 1995 (\$EC 1,432.4 or \$US 530.5 and population 760,379).

GROSS DOMESTIC PRODUCT AT CURRENT PRICES

MDCs contributed to approximately 85% of GDP (at Current Prices) in the region in 1990-99 with the remaining 15% obviously, being the contribution of the LDCs. Trinidad and Tobago and Jamaica were the highest contributors to GDP at Current Prices, with Trinidad and Tobago averaging over 32.0% for the period 1990-99. Jamaica was the next highest contributor to GDP with an average of approximately 31.3% for the same period followed by Barbados with 11.1%. Belize, Saint Lucia and Guyana with an average contribution of 3.1% were the next highest contributors and were followed closely by Antigua and Barbuda with 2.9%. The contributions of the other countries were: Grenada (1.6%), St. Vincent and the Grenadines (1.5%), Dominica (1.3%), St. Kitts and Nevis (1.3%) and Montserrat (0.3%). As indicated in the preface uncoordinated movements between the exchange rates and prices for countries that do not use \$EC limits the comparison of GDP in current prices when the data in national currencies are converted into \$EC.

2. COUNTRY HIGHLIGHTS – INDUSTRY AND EXPENDITURE COMPONENTS

MDCs

THE BAHAMAS

The key sectors contributing to GDP on average for the period 1990-95 were Wholesale and Retail Trade (14.1%), Real Estate and Business Services (11.6%) and Hotels and Restaurant with 10.2%. Financial services industry was estimated at 5.3% of GDP. By expenditure components, private final consumption expenditure was approximately 68.7% of total GDP for the period 1990-95 with Investment to GDP averaging approximately 22% and the net position of exports of goods and non-factor services being -1.3%.

BARBADOS

The overall rate of growth of GDP at constant prices for Barbados for the ten-year period 1990-99 was 0.5%. There was negative GDP growth of 1.8% on average in the first five years (1990-94) whilst there was positive growth in the more recent five year period (1995-99), averaging 2.9%. In 1990-94 with the exception of electricity, gas and water with a growth rate of 1.9%, all other industries exhibited negative growth. However, in the period 1990-99 only Agriculture and Government Services both with -0.1% showed negative growth with negligible change in the Manufacturing industry. This movement to more positive growth rates in the period 1995-99 reflected a general improvement in economic activity in Barbados. A key indicator was the movement in the *Construction* industry with an average growth rate of -8.0% in the period 1990-94 improving to 10.7% in the period 1995-99.

At *constant prices* for Barbados, the industry with the largest contribution to GDP in the period 1990-99 was *Wholesale and Retail Trade* (19.3%) followed by Business and General Services (17.3%) Tourism (14.9%) and Government (13.4%). The contribution of Agriculture to GDP was 6.7% for the period 1990-99 while that of Manufacturing was 9.7%.

In this same period 1990-99, at *current prices*, the industry, *Business and General Services*, was the highest contributor to total GDP with 20.6%. Wholesale and Retail Trade (18.2%), Government services (17.8%) and Tourism (12.3%) were the other industries with relatively high contributions to GDP in that order, in 1990-99. The contribution of Agriculture to GDP was approximately 5.5% for the period 1990-99 while the Manufacturing industry contributed 6.9%. There was a decline in the contribution of Manufacturing from a period average of 7.6% in 1990-94 to 6.2 % in the more recent period, 1995-99.

Similar to the trend in the growth rates the investment to GDP ratio was also higher in the period 1995-99 (17.6%) as compared to the period 1990-94 (14.5%). The value of net goods and non-factor services was negative for the years 1990-91 and 1997-99, the highest negative percentage to GDP being -4.9% in 1999. Therefore improved growth rates did not necessarily change the balance in exports of goods and non-factor services over that of imports of these items in the last five years. The share of private final consumption expenditure to GDP was the highest expenditure component with an average of 61.9% for the entire period.

GUYANA

The rate of growth of real GDP for 1990-99 was 4.8%. For the period 1990-94 the growth rate was 5.5% and for 1995-99 it was 4.1%. For the most recent years 1995-99, the industry with the highest growth rate was Construction and Engineering with 6.3%. Transport and Communication experienced

the next highest growth with 5.6% in 1995-99. The growth rate in Mining and Quarrying was on average 2.6% in 1995-99 and was 16.7% in 1990-94 showing a decline in this industry. Similarly the growth rate in Agriculture Forestry and Fishing was 11.4% in 1990-94 and increased at the lower rate of 5.4% in 1995-99. Manufacturing however, showed negative growth on average for the period 1990-94 (– 4.5%) but this improved to a positive growth rate of 3.2% for the period 1995-99 to end with an overall period average of –0.6% for the entire period 1990-99.

At constant prices Agriculture was the highest contributor to GDP with a period average in 1990-99 of 33.3%, the highest figure being a contribution of 36.4% in 1999. Government Services was the next highest contributor in constant prices with a percentage share of 14.3% in 1990-99 followed by Mining and Quarrying with 10.9% for the same period.

Agriculture appeared to be the main contributor to GDP in current prices for the years 1990-1999 with an average of 37.5% for this period and as high as 41.2% in 1995 and 40.8% in 1992. In 1999 the share of agriculture in GDP declined to 34.6%. Mining and Quarrying was on average the next highest contributor to GDP followed by Manufacturing and Processing with values of 16.4% and 11.3% respectively for the period for the period 1990-99.

Private final consumption expenditure to GDP was 60.9% in 1990 at the beginning of the period of data and fell to 47.1% of GDP in 1999. The 1990-94 period average of private consumption expenditure was 52.7% while for the 1995-99 period the ratio was 46.3% with an overall average of 49.5%. The ratio of goods and non-factor service to GDP was negative for all the years with a high of -17.7% in 1992 but reducing to -8.3% in 1999. The investment to GDP ratio fell to its second lowest value for the ten-year period at 36.4% in 1999, the lowest percentage being 35.3% in 1991.

JAMAICA

The rate of growth of GDP at constant prices was 1.5% for the period 1990-99 with the growth rate for the most recent years 1995-99 being –0.6% as compared to 3.6% for the period 1990-94. Miscellaneous Services exhibited a growth rate of 15.2% in the period 1990-99 but most of this growth was in the period 1990-94 (28.3%). Finance, Insurance with a growth rate of 7.3% and Transport, storage and communication with 6.6% were also among the highest growth industries for the 1990-99 period, followed by Agriculture, Forestry and Fishing with 5.1%. Negative growth industries were Manufacturing (-1.6%), Construction and installation (-1.4%), Producers of Government services with –0.3% and the estimate of Households and nonprofit institutions serving households with –2.2%. The average growth for the period 1995-99 saw negative growth in six industries including Manufacturing, -

2.6%, Finance/Insurance, -1.8%, Construction and Installation, -1.9%, and Agriculture, Forestry and Fishing, -1.6%.

At Constant prices, the industries, Distribution, Manufacturing, and Finance and Insurance were the highest contributors to GDP. Distribution contributed approximately 19.2% to GDP for the period 1990-99. Manufacturing contributed 17.6% to GDP in the same period while the share of Finance/Insurance was 12.2% of GDP. Transport, Storage and Communications also contributed over 11.7% of GDP for the period 1990-99.

Distribution, Manufacturing and Construction were on average the most significant industries at current market prices for the period 1990-99. The percentage contribution of Distribution was 20.2% for the period 1990-99. The average contribution of Manufacturing was 16% of total GDP in 1990-99 with its share of GDP being 17.7% in 1990-94 and 14.3% in 1995-99 showing on average a decline in the contribution of this industry at current prices. Construction's contribution to GDP was 10.5% for the period 1990-99 and showed slight decline from an average of 11% for the period 1990-94 to 10% for the more recent years 1995-99.

By expenditure components private consumption expenditure was over 66% of GDP with investment to GDP being 28.2% and goods and non-factor services -7.8% for the period 1990-99.

SURINAME

The overall growth rate of GDP (1990-99) for Suriname at constant prices was 3.1% with the highest growth being 9.5% in the period 1995-99 as compared to an average of -3.3% in the period 1990-94 signaling improvement in economic activity. Industries with the highest growth rates for the period 1990-99 were Mining and Quarrying with 14.7% and Hotels and Restaurants with 11.1%. The growth rate of Mining and Quarrying was 6.6% in 1990-94 compared to 22.8% in 1995-99. Transport, Storage and Communication (-4.3%), Finance and Business Services (-7.8%) and Agriculture (-3.4%) showed negative average growth rates in the period 1995-99 as compared with the period 1990-94.

At constant prices, Finance and Business Services had the highest contribution to GDP with 17.3%, followed by Trade, Hotels and Restaurants with 16.5%, Public Administration with 15.6% and Mining and Quarrying with 14.5%. The average contribution of Mining and Quarrying increased from 11.4% in the period 1990-94 to become 17.6% in the period 1995-99 and was the second highest contribution to GDP for this recent five-year period.

At Current prices, Trade, Hotels and Restaurants were conclusively the highest contributors to GDP for the period 1990-99 with a share of 23.4%. Finance and Business Services contributed 15.4% and Agriculture, 13.3%. Public Administration and Manufacturing with 12.1% and 11.9% respectively

were also major contributors to GDP for the period 1990-99. The shares of Mining & Quarrying, Gas Electricity and Water, Trade, Restaurants and Hotels and the industry - Personal and other Community Services showed increases from its average contribution in 1990-94 as compared to the average shares in the period 1995-99.

Private final consumption expenditure to GDP was on average 51.4% during the period 1990-99 with the investment to GDP ratio being 27%. There were fluctuations in this ratio throughout the period with a high of 50.9% in 1995 declining to 6.4% of GDP in 1999.

TRINIDAD AND TOBAGO

The overall rate of growth of GDP for the period 1990-99 was 2.9% with the growth for the first four years 1990-94 being (0.9%). For the period 1995-99 the rate of growth was 4.8%. The Manufacturing industry, which also reflects the processing of petroleum and related chemicals and natural gas, was a significant growth industry with 8.0% for the ten-year period with a period average growth rate of 12.7% in 1995-99 as compared to 3.4% in 1990-94. While there was a high growth in Hotels and Restaurant of 14.2%, at constant prices during the period 1990-99, the contribution of this industry to GDP for this period was only 1.3% also at constant prices.

At Constant Prices, *Mining and Quarrying* was the highest contributor to GDP with 17.3% for the period 1990-99 followed by General Government with 15.0%. Manufacturing, 13.2% and Distribution, 12.8% were the next highest contributors in real terms. Mining and Quarrying, which includes oil exploration and production activities, moved from an average contribution of 19.1% in 1990-94 to 15.5% in 1995-99. Manufacturing which includes the oil-refining and petrochemicals activities increased from an average of 12% in 1990-94 to 14.5% in 1995-99.

The major contributors to GDP for the period 1990-99 at current prices for Trinidad and Tobago were Distribution with 16.7%, Manufacturing, 15.0%, Mining and Quarrying, 14.5% and Finance, Insurance and Real Estate and Business Services with 12.8%.

Private consumption expenditure to GDP was on average 56.1% for the period 1990-99. The ratio of investment to GDP was 20.9% for the period 1990-99 with the average for the period 1990-94 being 15.7% and for 1995-99, 26.1% implying an increase in investment to GDP in recent years. Goods and non-factor services were negative for the years 1997-99 with the period average for 1995-99 being 3.3% as compared to 10.3% in 1990-94 reflecting a decline in exports of goods and non-factor services relative to imports of these services.

LDCs

BELIZE

The rate of growth of GDP stood at 4.7% for the entire period 1990-99 with Trade, Hotels and Restaurants growing at 4.5% Agriculture, 6.5% and Transport and Communication, 6.4%. Manufacturing which was amongst the main contributors to GDP at constant prices grew at 3.6% during this same period.

At constant prices the contribution to GDP in real terms also showed Trade, Hotel and Restaurants with the highest percentage share of 18.2% of GDP followed by Manufacturing with 16.5%. Agriculture and Transport & Communication contributed approximately 14% to GDP in constant prices. Including Forestry and Logging and Fishing in Agriculture imply that this wider coverage of Agriculture contributes to 20% of GDP in constant prices

The major contributing industry to GDP for Belize at current prices for the period 1990-99 is Trade, Hotels and Restaurants with the average share to GDP being 18.1%. Agriculture with 15.2% (excluding forestry, logging and fishing) and Manufacturing with 14.3% followed in this order. The inclusion of the activities of forestry, logging and fishing will make Agriculture the highest contributor to GDP in 1990-99 with 19.9%.

By expenditure components, for the period 1990-99, the private consumption expenditure to GDP ratio was on average 63.7% while investment was approximately 27% of GDP and Goods and non-factor services, -7.2%.

OECS COUNTRIES

ANTIGUA & BARBUDA

The overall growth rate of GDP for the period 1990-99 was 3.4% Communications and Banks and Insurance had significant growth of 10.0% and 8.9 respectively for 1990-99. In general, the growth rate for the other industries were approximately 4% or less for this same period.

At constant prices Government Services and Hotel and Restaurants were also the most significant contributors to GDP in 1990-99 with 16.4% and 14.8% respectively. For the period 1990-99 Government Services was the most significant contributor to GDP at current prices for Antigua and Barbuda with 17.3%. Hotels and Restaurants contributed 13.7% to GDP for the same period.

Private final consumption expenditure was approximately 47% of GDP for the period 1990-99. The investment to GDP ratio was 37.3% on average for the entire period. With the exception of 1991 and 1995-99, the ratio of goods and services (net) to GDP was negative for all the other years with an average of 3.9% for the ten-year period.

DOMINICA

The growth rate of GDP for Dominica for the period 1990-99 was 2.7% with the growth rate for the most recent period 1995-99 being 2.2% as compared with 3.2% in the period 1990-94. The industry with the highest growth rate for the period 1990-99 was Communications with 9.3%, with the growth rate for 1995-99 for this sector being 11.5%. Hotels and Restaurants also experienced moderate growth of 8% for 1990-99. There was negative growth rate in agriculture of -0.4% for the ten-year period, with the growth rate for the first five years being 1% and for the last five years, -1.7%. Government Services grew at 1.6% on average for the period 1990-99.

In Dominica, for the period 1990-99, at both current and constant prices, Agriculture still remained the highest contributor to GDP despite its low growth performance. Government Services, Banks and Insurance and Wholesale and Retail Trade also contributed significantly to GDP. Agriculture's contribution was approximately 21% of GDP at current prices and 21.7% at constant prices while Government Services contributed 19% at current prices and 17.7% of GDP at constant prices in 1990-99. Banks and Insurance contributed 11.3% and 12.2% at current and constant price respectively and Wholesale and Retail Trade contributed 11.9% at constant prices and 11.4% at current prices.

Private final consumption expenditure was 62.9% of GDP for the period 1990-99. The investment to GDP ratio was 29.8% and the component, Goods and Non-factor Services (net), was -13.6% of GDP for the same period.

GRENADA

The overall growth rate for Grenada for the period 1990-99 was 3.7% the growth rate for the period 1990-94 was 2.4% and for the last five years, 1995-99, 5.0%. The industry with the highest rate of growth for the period 1990-99 was Communications with 11.3%. The contribution of this industry to GDP at constant prices was 9.8% for the ten-year period and 11.1% for the period 1995-99. Electricity and Water and Manufacturing grew at 6.8% and 6.2% respectively for 1990-99. Agriculture experienced negative growth of -1.0% for the entire period, 1990-99, while the growth rate of manufacturing was 6.2%.

In Grenada Government Services contributed approximately 18% of GDP for the period 1990-99 and this is the highest contributor to GDP in current prices. The share of the Transportation industry in GDP in current prices was 14.3% while Wholesale and Retail Trade contributed 11.3% of GDP. At constant prices, these three industries were the highest contributors to GDP in the identical order but with slightly lower percentages as compared to the current prices. Government Services contributed 17.1%, Transport's share was 13.9% and Wholesale and Retail Trade was 11.8% of the GDP at Constant Prices.

The investment to GDP ratio was 35.3% on average for 1990-99 while Private Final Consumption was 65.2% of GDP and Goods and Non-factor Services –18.2% of GDP.

MONTSERRAT

In general the data for Montserrat appears to be very erratic. This country has been affected to a great extent by volcanic activity particularly over the last five years. For the entire ten-year period the fluctuations in the real growth rate and percentage contributions at current and constant prices are apparent in the data. Effectively, this country has experienced negative average growth rates in all industries over the last five years 1995-99, with the exception of Construction where the growth rate was 13.6%. Agriculture had the most negative growth rate in this period of 29.9%.

Looking at the various industries' contribution to GDP over the last five years for Montserrat at constant prices, the major contributor to GDP was Government Services with 28.7% followed by Construction with 18.1%. These two industries also had the highest share of GDP at current prices with Government Services having 27.9% and Construction, 15.5%.

The expenditure components of GDP show the heavy dependence on imports presumably for both consumption and investment. Construction was the highest component of capital formation throughout the period with 33.1% on average for 1990-99. For the entire period 1990-99 imports of goods and non-factor services increased relative to exports contributing to very high and negative ratios of goods and non-factor services(net) to GDP in this period.

ST KITTS & NEVIS

St Kitts and Nevis experienced an overall growth rate of GDP of 4.1% for the period 1990-99. Communications showed the highest growth rate for the period 1990-99 with 10.0%, followed by Bank and Insurance with 8.9%. The growth rate of manufacturing was 2.5% and agriculture was 0.4% in 1990-99.

Government Services (18.0%), Wholesale and Retail Trade (14.2%), Construction (12.3%) Bank and Insurance (11.1%) and Manufacturing (11%) were the highest contributors GDP at current prices for St. Kitts and Nevis for the period 1990-99. These industries also were among the major contributors to GDP in constant prices for the same period to which must be included Manufacturing which contributed 11.6% of GDP at constant prices. Agriculture's contribution was 6.4%.

Private final consumption expenditure to GDP was 56.3% on average for the period 1990-99 while the investment to GDP ratio was 43.6%. Goods and Non-factor Services was -18.7% of GDP for the same period.

SAINT LUCIA

The overall growth rate of GDP for the period 1990-99 was 2.5%. Communications with 10% had the highest growth rate for the period 1990-99 followed by Electricity and Water with 8.5, Other services with 7.8% and Hotels and Restaurants with 6.2%. Agriculture's growth rate was -3.0% while the growth rate in manufacturing was 0.5%. At current prices for the period 1990-99, Wholesale and Retail Trade with 15.2% was the highest contributor to GDP followed by Government Services, 14.1% and Hotels and Restaurant with 11.8%. At constant prices Wholesale and Retail Trade with 14.7%, Government services with 12.5, agriculture and Hotels and Restaurants with 11.3% each were the highest contributors to GDP for the period 1990-99.

For the period 1990-99 Private final consumption expenditure was on average 81.3% of GDP with investment to GDP being 26.6% and the ratio of Goods and non-factor services being negative at 7.3%.

ST VINCENT and the GRENADINES

The rate of growth of GDP for the period 1990-99 was 3.6% with a higher growth rate in the period 1995-99 (4.5%) as compared to the period 1990-94 (2.8%). The highest rate of growth in 1990-99 was in communications with 8.5% and its contribution in constant prices to GDP was 8.3% for this same period. The growth rate in Wholesale and Retail Trade was 8% on average for the entire period while manufacturing experienced negative growth rate of -0.6% on average and there was negligible growth in agriculture overall due to significant decline of 32.5% in 1994. Agriculture's growth was stimulated however in the period 1995-99 with an average of 5.5%.

In St Vincent and the Grenadines, Government Services (16.9%), Wholesale and Retail Trade (14.4), Agriculture (14.3%) and Transport (13.3%) were the major contributors of GDP at current prices for the period 1990-99. At constant prices these four industries contributed a total of approximately 59%

of GDP with Government Services being the highest with 16.3% but this time it was followed by Agriculture with 15.4%.

By expenditure components, Private final consumption expenditure was 70.3% of GDP with the investment to GDP ratio being 29% and Goods and Non-factor Services, -19.2% on average for the period 1990-99.
