PREFACE

This is the twelfth edition of the National Accounts Digest prepared by the Regional Statistics Programme of the Caribbean Community (CARICOM) Secretariat. This Digest presents data for the period 2009-2015 and is an update to the last edition which was produced in 2015 and presented information for the period 2008-2014.

The National Accounts Digest, which is produced in two volumes, aims at providing statistics on the economic conditions and performance of the CARICOM region over a specific period as reflected in the Gross Domestic Product of its Member States and Associate Members. Most of the data presented in this volume were submitted by the National Statistical Offices (NSOs) through the United Nations National Accounts Questionnaire (NAQ) or were extracted from national and/or sub-regional reports or from web sites of the NSOs or Central Banks. More specifically the report presents:

- Industry profile of GDP in current and constant prices by country;
- Expenditure components of GDP by country; and
- Relations among product, income, saving and net lending aggregates, by country.

This report does not present data on percentage changes or distributions, instead, these indicators are provided in the supplementary volume which is usually produced a few months following the release of the current report.

For the most part, the data are reported in Eastern Caribbean dollars (EC\$) and also in the national currency of Member States at constant and current prices. The conversion of GDP from national currencies to a common currency through the use of official exchange rates, may, in some cases, be influenced by the effects due to the possibility of wide fluctuations between the national currencies and a common currency such as the EC or US dollar. This conversion sometimes renders the comparison of current prices among countries or current and constant prices of the same country meaningless.

The use of the nominal (official) exchange rate to convert GDP of one country to the currency of another assumes that the price structures of both countries are identical and that the goods being traded are also similar. Another approach would be to use Purchasing Power Parity (PPP) which seeks to eliminate the discrepancy that can arise in the interpretation of GDP when using nominal exchange rates conversion. However, the data requirements of detailed price and expenditure data are usually quite enormous and are often not available. Countries in the Region participated in the 2011 Round of the International Comparison Programme (ICP) which may make it possible to derive PPP rates.

There is an increasing demand for data that can monitor, analyse and evaluate the economies of the Region, information that is relevant, timely and readily available not only to policy and decision makers, but to anyone wishing to conduct economic analyses or research as well as information that lay persons can understand and relate to. The System of National Accounts (SNA) 1993, which is used by countries in the Region, provides the framework within which these data can be collected and compiled in order to observe and analyse the interactions taking place between the different sectors of the economy. At its fortieth session in 2009, the United

Nations Statistical Commission approved the 2008 SNA and though the countries of the CARICOM Region have not yet moved to this revised international standard, there has been agreement on a strategy for its implementation across the Region and some countries have taken steps towards its implementation.

The issue of data comparability, timeliness and reliability will have to be considered if the information is to be relevant and of an acceptable quality. In this vein, the CARICOM Secretariat welcomes any suggestions from users and producers that will guide us in improving the national accounting framework as reflected in this report.

ACKNOWLEDGEMENTS

The CARICOM Secretariat wishes to thank the National Statistics Offices of Antigua and Barbuda, The Bahamas, Barbados, Belize, Dominica, Grenada, Guyana, Jamaica, Montserrat, St Kitts and Nevis, Saint Lucia, St Vincent and the Grenadines, Suriname, Trinidad and Tobago, Anguilla, Bermuda, the British Virgin Islands, the Cayman Islands and the Turks and Caicos Islands for supplying the data for the compilation of this report. Appreciation is also extended to the Central Bank of Barbados and the Eastern Caribbean Central Bank.

Special thanks to the staff of the Regional Statistics Programme for producing this report.

CONCEPTS AND DEFINITIONS

1. GROSS DOMESTIC PRODUCT:

A key aggregate of the system of National Accounts is the Gross Domestic Product. The Gross Domestic Product (GDP) of an economy is the total value of all goods and services produced by all institutional units resident in the economy within a given time period, usually one year. It includes the allowance made for the consumption of fixed capital.

Gross value added is a measure of GDP in which a principal consideration is that duplications must be avoided which is achieved by deducting from the output of each producing unit the value of the inputs of goods and services received from other units, at home or abroad, i.e. GDP can be derived as the *sum of the value added* of resident institutional units in an economy. This measure of GDP is also identical with the *sum of the final expenditures* on consumption, on gross capital formation and adjusted for exports *less* imports of goods and services. GDP is also equal to the *sum of the incomes* accruing from production which includes compensation of employees, consumption of operating surplus and fixed capital.

2. GROSS NATIONAL INCOME (GNI):

Gross National Income (GNI) is equal to GDP less primary incomes payable to non-resident units plus primary incomes receivable from non-resident units. In the 1993 System of National Accounts (SNA), GNI is synonymous with the Gross National Product (GNP) of the 1958 SNA, however, conceptually GNI is not a concept of value added, but more one of income. GNI is the aggregate value of the gross balances of primary incomes for all industries. The primary income components are taxes (less subsidies) on production and imports, compensation of employees and property income in *all* cases payable/ receivable to/from the rest of the world.

3. THE GROSS OUTPUT OF INDUSTRIES:

Gross output is the value of goods and services produced within an accounting period adjusted for changes in stocks of finished goods and work-in- progress. Output consists of goods and services that are produced within an establishment that are disposed of in one of the following ways:

- (a) *Market output* which includes the total value of all goods and services sold on the market, bartered, used for payments in kind, supplied by one establishment to another belonging to the same market enterprise and the total value of changes in inventories of finished goods and work-in-progress intended for all these uses mentioned herein.
- (b) Output for *own final use* which includes goods and services that are retained for their own final use by the owners of the establishments within which they are produced, the total value of fixed assets produced by an establishment that are retained within the same enterprise for use in future production and the total value of changes in inventories of finished goods and work in progress intended for one of the uses contained herein.
- (c) Other *non-market output* includes goods and services that are provided free or at prices that are not economically significant. Common examples are the goods and services produced by government units or by non-profit units serving households (NPISHs) such as education and health services.

4. INTERMEDIATE CONSUMPTION:

Intermediate consumption consists of the value of non-durable goods and services consumed as inputs by a process of production. The value of all goods and services that are used as inputs into ancillary activities such as accounting, marketing etc. are included as intermediate consumption. The consumption of fixed assets is excluded from intermediate consumption as well as purchases of valuables (capital account). In addition goods and services that are produced within the same establishment and fed back as inputs into production within the same establishment are not recorded as intermediate consumption.

5. CONSUMPTION OF FIXED CAPITAL:

Consumption of fixed capital is defined as the decline during the accounting period in the current value of the stock of fixed assets owned and used by a producer. This decline in the fixed assets can be due to physical deterioration, normal obsolescence, or accidental damage and excludes the damage caused by acts of war and other such exceptional events. Consumption of fixed assets should be considered a cost of production. The inclusion of this item in value added gives rise to the *gross* concept of GDP with the inclusion allowing for a *net* measure of value added and GDP.

6. VALUATION OF GDP

Outputs and inputs can be valued in the following ways:

Basic prices

The basic price is the amount receivable by the producer from the purchaser of a unit of a good or service produced as output minus any tax payable and plus any subsidy receivable on that unit, as a consequence of its production or sale. It excludes any transport charges invoiced separately by the producer.

Producers' prices

The producers' price is the amount receivable by the producer from the purchaser for a unit of a good or service produced as output minus any value added (VAT) or similar deductible tax, invoiced to the purchaser. It excludes any transport charges invoiced separately by the producer.

Purchasers' price

The purchasers' price is the amount paid by the purchaser, excluding any deductible VAT or similar deductible tax, in order to take delivery of a unit of a good or service at the time and place required by the purchaser. It includes any transport charges paid separately to take delivery at the required time and place.

The above valuation concepts are in-keeping with the recommendations of the 1993 SNA. Output can be measured either at basic or producers' prices. Intermediate inputs should be valued at purchasers' prices.

GDP at *Market Prices* is equal to GDP at basic prices plus all taxes less subsidies on products, this includes taxes less subsidies on imports as well as on outputs.

7. TAXES ON PRODUCTION AND IMPORTS

Taxes are compulsory unrequited payments in cash or in kind made by institutional units to government units. Taxes on production and imports consist of:

- taxes on products payable on goods and services when they are produced, sold and otherwise disposed of by their producers;
- other taxes on production comprising taxes on ownership/use of land, buildings or other assets used in production or on the labour employed or on the compensations paid to employees.

These taxes are recorded as being payable out of the gross value added. The term indirect tax which was formally used is no longer commonly used in the 1993 SNA. Indirect taxes which correspond to the taxes on production and income are compulsory payments to Government which industries treat as part of the cost of production. They include import and export duties, excise, sales, entertainment and turnover taxes, real estate and land taxes, levies on value added and the employment of labour (but not social security contributions), motor vehicles, driving tests, licenses, airport and passport fees when paid by producers.

8. SUBSIDIES

Subsidies are current unrequited payments that government units, including non-resident government units, make to enterprises on the basis of the levels of their production activities or values of the goods and services they produce, sell or import. They are receivable by resident producers or importers and may be designed to influence the levels of production, the prices at which outputs are sold or the remuneration of the institutional units engaged in production. Subsidies are not payable to final consumers. Current transfers that government make to households are treated as social benefits. In effect, subsidies are treated as *negative* taxes on production.

9. FINANCIAL INTERMEDIATION SERVICES INDIRECTLY MEASURED - IMPUTED SERVICE CHARGES

The imputed service charge, referred to as Financial Intermediation Services Indirectly Measured (FISIM) in the 1993 SNA, is an adjustment that is required to GDP to take into consideration the estimation of the output of some financial intermediaries that do not charge explicitly for all services provided. These services include the borrowing and lending of funds from/to different categories of borrowers and lenders while paying/charging different rates of interest. The net receipt of interest defrays the costs of providing these services (that are not individually charged) and also provides operating surplus for the intermediaries. This total value of FISIM is the net property income received by these intermediaries and should in principle be allocated as intermediates among the users of these services. Due to the difficulty in allocating FISIM, in practice, it is normally recorded as intermediate consumption of a nominal industry and deducted from GDP (Imputed Service Charge).

10. SELECTED EQUATIONS IN THE SYSTEM OF NATIONAL ACCOUNTS

- (1) Gross Domestic Product (GDP) at market prices
= Output plus Taxes, less Subsidies, on products – Intermediate Consumption
- (2) Gross Domestic Product (GDP) at Market Prices
= Final Consumption Expenditure plus Changes in Inventories plus Gross fixed capital formation plus Acquisition less Disposal of valuables plus Exports of Goods and Services less Imports of Goods and Services

- (3) Gross National Income = GDP at Market Prices
plus Taxes, less Subsidies, on Production and Imports (net receivable abroad) plus
compensation of employees (net, receivable abroad) plus Property Income (net
receivable abroad)
- (4) Net National Income (NNI or equivalent to NNP) at Market Prices
= GNI at Market Prices less consumption of fixed capital
- (5) Net National Disposable Income (NNDI) = NNI at Market Prices plus Current Taxes on
income, wealth etc. (net receivable from abroad) plus social contributions and benefits and
other Current Transfers (net, receivable from abroad)
- (6) Net National Disposable Income (NNDI) = Final Consumption Expenditure plus
Adjustment for the change of net equity of households on Pension funds (net receivable
from abroad) plus Saving, net.

11. NATIONAL ACCOUNTS AT CONSTANT PRICES:

For analytical purposes, the National Accounts at Constant Prices are derived by breaking current values down into a price component and a quantity component. For the purposes of deriving constant price estimates of GDP, a base year is selected which is deemed to be a normal year. Estimates at Constant Prices are usually derived by deflating the current year's values by price indices or by extrapolating the base year values by appropriate volume indices. Both methods are equivalent to expressing current period quantities at base period prices.

12. COMPILATION PRACTICES

The main practices used to compile National Accounts are the Production, Income, Expenditure and the Commodity Flow approaches. The conceptual bases of these approaches are as follows:

- ❖ The *production* approach uses establishments as the basic reporting units and groups them into production activities. The sources of data are normally surveys or censuses of establishments, agriculture and similar sources, business accounts of enterprises and administrative records. Total output and intermediates are compiled from which the value added is estimated. Estimates are adjusted for the output of financial intermediation. The production data are also to be reorganised by institutional sectors.
- ❖ In the *expenditure* approach elements of expenditure as illustrated in the equations highlighted earlier are estimated. Imports and exports, usually measured freight on board (f.o.b.), are estimated from the data on foreign trade and balance of payments statistics. Data on government's final expenditure are obtained from the records of government's revenue and expenditure. Gross capital formation comprises gross fixed capital formation, changes in inventories and acquisitions less disposals of valuables. The sources of data for gross capital formation are surveys and administrative records.
- ❖ The *income* approach derives independent estimates of compensation of employees, operating surplus, gross fixed income, and taxes less subsidies on production. Sources of data are similar to the expenditure aggregates.

- ❖ The *commodity flow* approach incorporates the three approaches described above and uses as a basis the Supply and Use Tables (SUT). The supply table, which shows the value of different products that are produced by each industry as well as imports, and the use table, shows the use of every product in the economy including exports. The basic principle is that the supply of every product must be equal to the use of that product at the level of the economy. The method therefore entails the compilation of product or commodity flows. Sources of data are derived from those of the other approaches.

13. GOVERNMENT'S FINAL CONSUMPTION EXPENDITURE

This is defined as expenditure including imputed expenditure, incurred by general government on both individual consumption of goods and services as well as on collective consumption (e.g. community services such as security). Government's expenditure is largely financed out of taxation and other government's revenues. Government's final consumption expenditure may be classified according to its purpose or function such as Education, Health, General Administration and so forth.

14. PRIVATE FINAL CONSUMPTION EXPENDITURE

This component of GDP is defined as the outlays of households on new durable and non-durable goods and services less their net sales of second-hand goods, scraps and waste. Purchases of dwellings are treated as gross fixed capital formation of the real estate industry. The imputed rent of owner-occupied dwellings is a part of the gross output of the real estate industry and is also included in the final consumption expenditure of households.

15. GROSS CAPITAL FORMATION:

Gross capital formation consists of gross fixed capital formation, changes in inventories and acquisitions less disposals of valuables. Gross fixed capital formation in turn, consists of acquisitions of fixed assets less disposals plus certain additions to the values of non-produced assets. Fixed assets are produced assets that can be used repeatedly or continuously over a period of time of one year or more. The acquisitions of new assets also include major improvements and renovations to fixed assets that increase significantly their productive capacity. Non-produced assets consist of assets that are needed for production but have not themselves been produced, e.g. land and mineral deposits.

Changes in inventories are the market value at the owning establishment of the physical change during an accounting period in stocks of materials, supplies, work-in-progress except on construction projects, finished products, livestock raised for slaughter, merchandise of strategic materials held by resident industries in stock and emergency stocks of important products held by Government services. In practice, the closest feasible approximation may be the difference between the levels of these stocks at the beginning and the end of the period, both valued at approximate average prices ruling over the period.

Valuables are assets that are not used for production or consumption and are therefore held primarily as a store of value.

16. EXPORTS AND IMPORTS OF GOODS AND NON-FACTOR SERVICES

Exports and imports of goods and services consist of the transactions in goods and services of the residents of a given country with the rest of the world, and covers merchandise, transportation, travel, insurance and other non-factor services, such as various fees, rentals, royalties, gifts in kind, etc. Military equipment

transferred between governments may, however, go unrecorded. Expenditure abroad by residents such as tourists and other persons, seasonal workers, and diplomatic and military personnel stationed abroad are treated as imports. Similarly, expenditures in the domestic territory by non-residents are considered exports.

The valuation of exports and imports are free on board (f.o.b.) which is the price at the frontier of the exporter after it has been loaded onto the carrier and also after payment of export taxes less receipt of any rebates. In practice, some countries in the region record imports according to the convention of cost, insurance, freight (c.i.f.) which is the valuation at the frontier of the importing country inclusive of the cost of transportation and insurance.
